

KUMARI ARIVIAI PERAVAI

Second Meeting Report for Space Team

Place: Udhayagiri Fort

Date: 29-11-2009

Time: 2.30p.m to 5.00p.m

D.AMBARISH JAYA MANO

LEADER

SPACE TEAM

The second meeting of our space team was conducted at Udhayagiri Fort Puliurkuruchi. It is a place which is filled with Mother Nature's boom. Deers and fishes are specially grown here. A beautiful children's park and a garden with medicinally important plants are very nice to play and enjoyable. Ducks and, monkeys, rabbits are roaming here and there. Peacock are dancing in between the trees, parrots are speaking from the cages. Many small cottages are there to take rest for the visitors. The mountain near the fort is filled with varieties of plants. The big trees like Tamerinadus Indica, Agle Mormelus, Emblica etc are growing here. Many herbs and shrubs are giving pleasure to see.

The meeting was presided by Ambarish Mano and began with a prayer song by Gayathiri. After the welcome address by Dharshika, Mr.Velaian gave his introductory address. When he was talking he said that, all must express their ideas and we should interact with the scientists and guides. Next our scientist Mr. Ingersol gave a useful speech about space. He advised us that we should not exploit the nature.

He told that all the young scientist have potentiality, but they do not realize that. Looking with bare eyes leads certain limits to see thing in the space. This results in the invention of telescope by Galileo. It is a trigger to enter in to outer space. He cautioned that certain spectrums of sunrays are harmless but certain spectrums are harmful. Human beings overcome obstacles by thinking radically and doing properly. we got valuable information about space and communication from Mr. Ingersol.

Young scientist Steve explained about rocket. We got a clear idea about what is rocket , how is it sent to space, types of rocket, structure of rockets, fuels, combustion chamber, types of satellites etc.

Ms. Jiya gave a presentation bout solar system. Apart from the sun it has planets like Dwarfs, Asteroids, moons and comets. Next to that Ms. Gayathiri Venugopal gave a nice presentation about space exploration. Space exploration is the use of astronomy and space technology to explore outer space. He explained about PSLV and GSLV rockets. He also explained about Chandrayan, which is near the moon and trying to find out the water in the moon.

Dr.Sasikumar .

Following that Mr.Velaian told that the space team is very good but the young scientist must develop their speaking ability. Communication of messages is very important.

Finally the session was winded up with the vote of thanks by Gaya. It was a pleasant experience to all of us .We are very grateful to KAP.

Thank you.
